

a **intact forest**
net uptake 1,013; retained 667 (wood 131, burial 123)

ghost forest
net loss 503, all of it respired or emitted as CH₄

→ photosynthesis → CO₂ emission → CH₄ emission → litter / wood / roots → lateral export → burial → unexplained
 $\text{g C m}^{-2} \text{ yr}^{-1}$; arrow width = $\sqrt{\text{flux}}$. Solid: measured here (tower GPP; chambers × scanned surface). Translucent, dashed: literature or closure residual.
